## Abstracts

Burns are a type of injury caused by exposure to heat. The heat can be thermal, electrical, chemical, or electromagnetic energy. The severity of burn depends upon the size and depth of the burn. Burns are defined as first, second, third or fourth degree burns, depending on how many layers of skin are burned. First degree burns are burns of the first layer of skin. Second degree burns are classified as superficial partial-thickness burns in which the first and second layers of the skin are burnt and deep partial-thickness burns injure deeper skin layers.

### Scope of the Report:

This report focuses on the Burn Care in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The advanced burn care dressings segment is expected to account for the largest share of the global market in 2018; while, the biologics segment is projected to witness the highest growth rate in the forecast period.

The global burn care market is dominated by North America, followed by Europe, Asia, and the Rest of the World (RoW). North America will continue to dominate the global market in the forecast period owing to factors such as increasing demand for biologics like skin grafts and its substitutes and high usage of advanced dressings in the U.S. Asia, on the other hand, is expected to grow at the highest CAGR in the next five years, with growth in this market centred at China, Japan, and India.

The worldwide market for Burn Care is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.

Market Segment by Manufacturers, this report covers
