Burn cooling gel is a topical first-aid product designed to rapidly cool and soothe minor burns caused by heat, sun, or chemicals. It's typically water-based and formulated to:

Reduce heat: By absorbing heat from the burned area, the gel helps prevent further tissue damage.

Relieve pain: The cooling effect numbs the burned area, offering temporary pain relief.

Minimize inflammation: Cooling can help reduce swelling and inflammation associated with burns.

Moisturize: Burn cooling gels often contain ingredients that prevent the burned area from drying out, promoting healing.

Reduce infection risk: Some gels may have antibacterial properties to help minimize the risk of infection in minor burns.
