In 2025, global sales volume of burnoff ovens (grills) is estimated at approximately 6,850,000 units, with an average selling price of around USD 185 per unit. A grill is a cooking device used in outdoor or household environments to heat and cook food, typically powered by charcoal, gas, or electricity. The category includes portable grills, backyard grills, and multifunctional cooking systems, widely used in family gatherings, outdoor camping, food service operations, and recreational activities. These products generally consist of heating systems, cooking grates, ventilation control systems, and structural enclosures, with significant variation in size, portability, and functional integration. In recent years, driven by the growing popularity of outdoor lifestyles and upgraded leisure consumption, grills have been evolving toward multifunctionality, portability, and premiumization.

From a market structure perspective, grills belong to the mass consumer segment within outdoor leisure equipment, with demand closely linked to disposable income levels, adoption of outdoor lifestyles, and regional consumption habits. North America and Europe represent the primary consumption markets with significant market shares, while growth in emerging markets is driven by the expansion of the middle class and consumption upgrading. The industry has relatively low technical barriers, with brand strength, distribution channels, and product design capabilities serving as key competitive factors. The market exhibits a structure where leading brands dominate the high-end segment, while the low-to-mid-end market remains highly fragmented.
