Burns and Scalds Treatment refers to therapeutic products and related wound-care products used for skin and soft-tissue thermal injuries caused by flames, hot liquids, steam, contact with hot objects, and other heat sources. Major products include burn ointments and creams, gels, sprays, and burn wound dressings. These products are primarily used to protect wounds, maintain an appropriate wound-healing environment, relieve local discomfort, and support wound repair. Depending on the depth and severity of the burn, they are used across home first aid, outpatient clinics, hospitals, and specialized burn care settings.

The Burns and Scalds Treatment market is mainly driven by demand arising from household accidents, industrial accidents, kitchen and food-service scalds, fires, and other thermal injuries. The product mix is gradually expanding from traditional burn ointments, creams, and basic dressings toward advanced wound-care products such as hydrogels, foam dressings, and antimicrobial dressings. Hospitals place greater emphasis on infection control, wound-healing performance, and ease of dressing changes, while the home-care market focuses more on convenience and immediate first-aid treatment. With continued advances in wound-care technologies and improved burn wound management in healthcare institutions, the penetration of higher-value advanced
