Bursting strength tester, also known as cardboard bursting instrument, cardboard bursting tester, carton bursting tester, cardboard bursting instrument, cardboard bursting tester, is an international general Lander instrument. It can be widely used in packaging materials, mainly used to measure the bursting strength of various cardboards and single-layer and multi-layer corrugated cardboards, and can also be used to test the bursting strength of non-paper materials such as silk and cotton cloth.

Internal competition in the bursting strength testing machine industry may be intensified by factors such as slow industry growth, a large number of competitors, homogeneity of products or services, and expansion of enterprise scale. As consumers or users of industry products, customers' bargaining power will affect the price, quality, and service level of bursting strength testing machines.
