Abstracts

Air suspension system is a type of vehicle suspension that uses an air pump or compressor to pump air into the airbag (bellow). These bellows are made from reinforced rubber to allow air pressure to inflate them and thus raise the vehicle body from the axle. A suspension system in a vehicle enables connection between the vehicle body and the wheels and allows relative motion between them. The main components included in the suspension are a system of tires, springs, shock absorbers, and linkages.

Scope of the Report:

This report focuses on the Bus Air Suspension System in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The changing consumer preferences, increasing disposable income driving people towards premium cars, and increasing demand for luxury busses are expected to drive the demand for automotive air suspension over the forecast period. The increasing purchasing power parity of the consumer, especially in developing economies such as India, China and Brazil is impelling the automotive manufacturers to come up with more number of premium cars. The increase in demand for cabin comfort, maneuverability, stability and better control of the vehicle together have led to an increase in the demand for air suspension systems in recent times.

APAC accounted for the maximum share of the bus air suspension system market during 2016. The demand for public bus transport facilities and the presence of countries with high population density, will be the major factors propelling the market's growth in this region during the forecast period. Moreover, the presence of major bus

manufacturers due to benefits such as low-cost production, labor, and supportive government policies will also contribute to the growth of the market in APAC. The worldwide market for Bus Air Suspension System is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
