In electric power distribution, a bus duct (also called busway), is a sheet metal duct containing either copper or aluminium busbars for the purpose of conducting a substantial current of electricity. Bus duct, is an electrical power supply distribution system that seamlessly distributes power from one end of the building to another. A key advantage of busway is its flexibility and adaptability to a wide range of requirements. It is widely used in industrial buildings, commercial building, civil building etc.

Bus duct provides flexible power distribution solutions for a variety of applications where change and adaptation are important. It offers a complete line of compatible, sandwich-type feeder and plug-in bus duct lengths and fittings. According to the different insulation way, bus duct is divided into BMC, CMC and CFW. CMC is the most widely used type which takes up about 59.6% of the global market.

China is the largest production country of bus duct in the world in the past few years and it will keep the same position in the next few years. China took up about 40% the global market.

The main manufacturers of Global Bus Duct include Schneider Electric, Siemens, ABB, Eaton, etc. These top four manufacturers hold a market share about 30%. In terms of application, the product is mainly used in commercial building, followed by industrial building.
