Abstracts

Heating, ventilation, and air conditioning (HVAC) systems are thermal management systems used to control the temperatures inside buildings and vehicles. The HVAC systems in buses work on a principle similar to that of other automotive HVAC systems but the required power for conditioning is higher than in other smaller vehicles.

Scope of the Report:

This report focuses on the Bus HVAC System in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The preference for automatic HVAC over the manual HVAC is one latest trends that will contribute to the growth of the global bus HVAC system market in the future. Over the past few years, bus HVAC system manufacturers have started concentrating on shifting their focus from manual HVAC systems to automatic HVAC systems due to its increased benefits. Automatic HVAC systems need less human intervention and manufacturers are working on differentiating their products from the competitors by introducing compact systems and sensors in HVAC systems. These technologies lower operational complexities and help in achieving better customer satisfaction. APAC is expected to be the major revenue contributor to the market throughout the forecast period. The rising volume of electric vehicles and the increased demand for public transit vehicles will drive the growth of the market in the region. Moreover, the shift in technology from manual to automatic HVAC systems will be an important driver for the growth of the market in this region. The worldwide market for Bus HVAC System is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in

2017, according to a new GIR (Global Info Research) study.
