Abstracts

According to our (Global Info Research) latest study, the global Bus Lift market size was valued at US\$ 437 million in 2025 and is forecast to a readjusted size of US\$ 587 million by 2032 with a CAGR of 4.2% during review period.

In 2025, global bus lift production reached 9,880 units, with an average selling price of US\$43,000 per unit. Bus lifts are specialized lifting equipment designed for the maintenance of heavy commercial vehicles such as buses, school buses, intercity buses, and public transport vehicles. They are used to safely lift the entire vehicle to a serviceable height using methods such as tire clamping, frame lifting, or axle lifting, supporting work on the chassis, brakes, suspension, wheel ends, electric drive axles, and battery packs. Applications are primarily in bus/passenger transport operator fleet bases, government and municipal maintenance centers, school bus fleets, PDI/repair lines of bus and chassis manufacturers, and heavy-duty comprehensive repair shops and tire/brake specialty stations. The upstream of the industry chain focuses on structural steel and profiles (columns/bases/tracks), hydraulic power units and key hydraulic components (cylinders, pumps, valves, hoses and seals), electrical and control systems (PLC/drive, battery and charging systems, synchronous control and communication, limit switches and emergency stops), and outsourced processes (welding, machining, surface treatment). The midstream consists of OEMs and system integrators; the downstream reaches end users through distribution/engineering installation/maintenance networks. The industry's gross profit margin typically ranges from approximately 20% to 35%.
