Scope of the Report:

This report focuses on the Bus Seating Systems in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The growing popularity of articulated bus over conventional bus as one of the primary growth factors for the bus seating systems market. Bus transit is a cost-effective solution to urban transport problems such as comfort, reliability, accessibility, and ease of use. This results in the increased demand for high capacity buses such as articulated buses that consist of more doors and an increased amount of step-free access. Additionally, to improve the transportation quality over conventional bus system, the governments of several countries are increasingly investing in bus rapid transit system (BRTS).

The preference of consumers in APAC is steadily shifting from mileage and speed of trains and rails towards the comfort of BRTS. The larger population and inexpensive alternative for intercity travel is contributing to the growth of the bus system in this region. Additionally, the rising pollution levels in metro cities is also compelling authorities to adopt hybrid, electric, and articulated buses with higher seating capacity.

The worldwide market for Bus Seating Systems is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
