Steering is the collection of components, linkages, etc. which allows any vehicle (car, motorcycle, bicycle) to follow the desired course. An exception is the case of rail transport by which rail tracks combined together with railroad switches provide the steering function. The primary purpose of the steering system is to allow the driver to guide the vehicle.

Scope of the Report:

This report focuses on the Bus Steering System in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. One trend in the market is enhanced bus steering system to reduce fuel consumption. The majority of the buses on the road has a steering system with conventional power steering pumps. This type of steering system is powered by the internal combustion engine, which eventually utilizes the fuel for it. One driver in the market is growing steering assisted technologies for buses. The bus market is continuously evolving with changing market dynamics across the globe. Since 2011, the global bus market has become competitive in nature with automakers competing through their distinct product offerings. The latest technologies in safety systems are also being used as product differentiators by the OEMs or automakers in their vehicles.

APAC is expected to be the major revenue contributor to the steering angle sensor market throughout the forecast period. Factors such as increased volume of buses and the rising demand for safety and comfort in buses will increase the replacement of older buses and will drive the growth of the bus steering system market in APAC.

The worldwide market for Bus Steering System is expected to grow at a CAGR of
