Abstracts

Bus switches are connected to high-speed digital buses. Their main characteristics are sub-nanosecond propagation delays and fast switching. Also, they do not create additional noises. They are suitable for voltage translation, hot swapping, hot plug, bus or capacitance isolation, and many other applications. Bus switch ICs are used to increase the speed and reduce the noise by isolating functions that do not need to drive the bus (or be driven by it) at any given moment, but may need to be connected later.

Scope of the Report:

This report focuses on the Bus Switch IC in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. One driver in the market is growing demand for cloud computing and IoT. The global IoT market is being amplified by the increasing rates of globalization and urbanization in all regions. A surprising number of users across the world today have access to multiple branches of IT, data sharing and storage methods, cloud computing solutions, and communication portals. Within the next three years, it is expected that more than 80% of all data center traffic will be cloud based. Also, most of this action will be going to public cloud services; there will be more workloads (nearly 54%) in the public cloud than in private clouds (46%). One trend in the market is growing use of high-speed gigabit Ethernet. Gigabit Internet is known as the next generation of broadband Internet service, and it is delivered over fiber optic lines and provides speeds of nearly 1,000 Mbps, which is also referred to as 1 Gbps or gigabit Internet.

This market study estimates that in terms of geographic regions, APAC will be the major revenue contributor to the digital switch IC market throughout the forecast period. This

is mainly due to growth in the manufacturing bases of original equipment manufacturers (OEMs). The developing countries in the APAC witness a growing demand for domestic consumer electronics from the end users. The growing consumer awareness about the use of advanced technology and the inclination towards better standard of living, will boost the growth of the bus switch IC market in this region. The worldwide market for Bus Switch IC is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
