Abstracts

According to our (Global Info Research) latest study, the global Bus Transmission System (BTS) market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Transmission forms a key function of vehicle powertrain. It is a type of gearbox that controls the power generated from an internal combustion engine to the wheel axle. Generally, an automotive transmission includes the entire drivetrain, which comprises components such as a gearbox, clutch, prop shaft, drive shafts, and differentials. Currently, different transmission types are used in vehicles, which include manual transmission (MT) and AT.

The latest trend gaining momentum in the market is transmission systems with higher number of gears. Automotive powertrain has the primary function to power the vehicle. A powertrain consists of engine, transmission, and other drivetrain components. As the technology progresses, many mechanical components in the transmission systems are being replaced with electric and electronic units. This has led to an overall increase in the transmission efficiency. With the fast switching through electronic circuits, the gearshifts have become faster and accurate, without any loss of tractive force. Also, the timing of the shift is continuously changed to adapt to the driving conditions. One of the major drivers for this market is increasing traffic congestion in developed and developing nations, leading to rise in public transports. Road traffic jams continue to be a major hurdle in most of the developed economies across the globe, which leads to delays, monetary loss, and fuel wastage.
