Abstracts

Transmission forms a key function of vehicle powertrain. It is a type of gearbox that controls the power generated from an internal combustion engine to the wheel axle. Generally, an automotive transmission includes the entire drivetrain, which comprises components such as a gearbox, clutch, prop shaft, drive shafts, and differentials. Currently, different transmission types are used in vehicles, which include manual transmission (MT) and AT.

Scope of the Report:

This report focuses on the Bus Transmission System (BTS) in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The latest trend gaining momentum in the market is transmission systems with higher number of gears. Automotive powertrain has the primary function to power the vehicle. A powertrain consists of engine, transmission, and other drivetrain components. As the technology progresses, many mechanical components in the transmission systems are being replaced with electric and electronic units. This has led to an overall increase in the transmission efficiency. With the fast switching through electronic circuits, the gearshifts have become faster and accurate, without any loss of tractive force. Also, the timing of the shift is continuously changed to adapt to the driving conditions. One of the major drivers for this market is increasing traffic congestion in developed and developing nations, leading to rise in public transports. Road traffic jams continue to be a major hurdle in most of the developed economies across the globe, which leads to delays, monetary loss, and fuel wastage.

In terms of geography, APAC accounted for the maximum shares of the BTS market

during 2016 and is foreseen to continue the domination during the forecast period. The introduction of stringent regulations and the increased demand for public transport from the developing countries such as India and China, will drive the market's growth in this region. Additionally, the focus of the major bus manufacturing companies to shift their manufacturing facilities to APAC due to the low-cost production, cheap labor, and favorable government policies that creates a low-cost market for transmission systems and other auto parts, will also propel the market's growth in this region. The worldwide market for Bus Transmission System (BTS) is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
