## Abstracts

According to our (Global Info Research) latest study, the global Busbar market size was valued at USD 13160 million in 2023 and is forecast to a readjusted size of USD 17570 million by 2030 with a CAGR of 4.2% during review period.

In electric power distribution, a busbar (also bus bar, and sometimes misspelled as buss bar or bussbar) is a metallic strip or bar, typically housed inside switchgear, panel boards, and busway enclosures for local high current power distribution. They are also used to connect high voltage equipment at electrical switchyards, and low voltage equipment in battery banks. They are generally uninsulated, and have sufficient stiffness to be supported in air by insulated pillars. These features allow sufficient cooling of the conductors, and the ability to tap in at various points without creating a new joint.

The utilities segment is the largest end-user of the market as it finds a number of applications such as switchgear, motor controls, and transformers, among others.

The Global Info Research report includes an overview of the development of the Busbar industry chain, the market status of Utilities (Low Power (Below 125 A), Medium Power (125 A–800 A)), Residential (Low Power (Below 125 A), Medium Power (125 A–800 A)), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Busbar.

Regionally, the report analyzes the Busbar markets in key regions. North America and Europe are experiencing steady growth, driven by government initiatives and increasing consumer awareness.
