The global Busbar Standoff Insulator market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Busbar standoff insulators perform an ancillary function within most electrical systems, they can be critical for maintaining a device's operational capability. A busbar standoff insulator typically supports a conductor at a distance from the surface, or substrate, to which it is attached. The insulator's high electrical resistance prevents the unintentional flow of current between a conductor and surrounding objects, effectively reducing the potential for power damage and energy waste.
