The global Buses market size is expected to reach \$ 22932 million by 2032, rising at a market growth of 2.9% CAGR during the forecast period (2026-2032).

In 2025, the global bus production reached 330,000 units, with an average market price of approximately \$55,000 per bus and a production capacity of around 500,000 units. The industry average gross margin was 16%.

A bus is a motor vehicle that operates between cities, towns, or urban and rural areas, specifically designed to transport passengers. It usually runs along fixed routes and schedules and is managed by public or private transportation companies. Buses are generally designed for high passenger capacity, easy boarding and alighting, and relatively low operating costs, making them suitable for daily commuting, short-distance travel, and urban-rural connectivity. With technological advancements, buses are continuously evolving. In addition to traditional fuel-powered models, an increasing number of cities are adopting electric or hybrid buses to reduce environmental pollution and energy consumption. Buses are not only an essential component of urban public transportation systems but also play a significant role in alleviating traffic congestion, lowering travel costs, and promoting green mobility.

Major upstream raw materials include: steel, power systems, electronics and electrical components, insulation materials, bearings, and electronic components.

Upstream suppliers include: Baosteel, Ansteel, ArcelorMittal, Cummins, ISUZU, WABCO, etc.

Downstream customers include: BVG, RATP, Connexion, FlixBus, Eurolines, etc.
