Abstracts

A bus is a road vehicle designed to carry many passengers. Buses can have a capacity as high as 300 passengers. The most common type of bus is the single-deck rigid bus, with larger loads carried by double-decker and articulated buses, and smaller loads carried by midibuses and minibuses; coaches are used for longer-distance services. Many types of buses, such as city transit buses and inter-city coaches, charge a fare. Other types, such as elementary or secondary school buses or shuttle buses within a post-secondary education campus do not charge a fare.

Scope of the Report:

This report focuses on the Buses and Coaches in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The increase in air pollution due to the rise in emission levels from vehicles has led to an increase in the global initiatives to reduce the emission level of greenhouse gases (GHG) into the atmosphere. Moreover, the transport sector contributes to about 32% of the overall GHG emission into the atmosphere. The buses and coaches that work on conventional fuel, such as diesel/gasoline, releases a large amount of GHGs after the combustion process. This has resulted in various regulations set by many regulatory bodies leading to design and development of various buses and coaches that operate on substitute fuels to cut down exhaust emission. The electric buses, hybrid buses, CNG/LNG buses, and solar buses have lesser exhaust emissions compared with the buses and coaches powered by diesel, and the emissions fall within required limit set by the regulatory bodies. This rise in government measures to limit emission levels will drive the market growth during the forecast period.

APAC is expected to be the major revenue contributor to the buses and coaches market throughout the forecast period. Rising population in various regions such as China, India, and South Korea, cheap fares, and increasing energy conservation efforts will drive the growth of the buses and coaches market in the region. The worldwide market for Buses and Coaches is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
