A virtual private network (VPN) is an Internet security service that creates an encrypted connection between user devices and one or more servers. VPNs can securely connect a user to a company's internal network or to the public Internet.

A business VPN is an app that provides end-to-end encryption for your business device's internet connection. This VPN encryption delivers a secured web connection to company devices, no matter where employees connect to the internet. Once your company data is encrypted, it is private and secure from fake Wi-Fi, hackers, governments, competitors and advertisers.

Businesses typically use a VPN to give remote employees access to internal applications and data, or to create a single shared network between multiple office locations. In both cases, the ultimate goal is to prevent web traffic — particularly traffic containing proprietary data — from being exposed on the open Internet.
