Abstracts

The global Button Mushroom Products market size is expected to reach \$ 30931 million by 2032, rising at a market growth of 7.5% CAGR during the forecast period (2026-2032).

Button mushroom (*Agaricus bisporus*) products refer to fresh and processed edible mushroom products derived from the most widely cultivated and consumed mushroom species worldwide. Unlike wild mushrooms or specialty varieties, button mushrooms are characterized by their small, round shape with a white to light brown cap and mild, earthy flavor that pairs well with various cuisines. Products include fresh whole mushrooms, sliced mushrooms, canned mushrooms (brine or marinated), frozen mushrooms, dried mushrooms, mushroom powder, and value-added products such as mushroom-based snacks, sauces, and seasonings. The button mushroom is the immature form of the *Agaricus bisporus* species; when mature, it is known as portobello mushroom. From a value chain perspective, upstream includes compost and substrate suppliers, spawn producers (mycelium), and controlled environment equipment providers; midstream involves mushroom cultivation, harvesting, sorting, packing, and processing (canning, freezing, drying, powdering); downstream demand spans grocery retail (fresh produce), food service (restaurants, pizzerias), industrial food processing (canned, sauces, soups), and nutraceutical ingredient manufacturing. In 2025, the average selling price is approximately US\$2,200 per ton, global sales volume is about 8,182k tons, and gross margins generally range from 15% to 30%, driven by substrate and compost costs, labor expenses, energy costs for climate-controlled cultivation, and seasonal demand fluctuations.
