The global Button Type Polymer Lithium Battery market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Button type polymer lithium batteries are usually stacked from multiple components with positive and negative electrode sheets respectively, and the positive and negative electrode sheets are separated by a polymer electrolyte. Button-type polymer lithium batteries have smaller size and weight, and can also be customized in different sizes and shapes according to needs, making them suitable for a variety of small portable devices.

The button type polymer lithium battery is a small, specially shaped polymer lithium-ion battery that is similar in size and shape to a button. The battery uses polymer electrolytes and metal manganese, cobalt, phosphorus and other compounds as positive and negative electrode materials, and has high energy density, low self-discharge rate and good safety performance.
