According to our (Global Info Research) latest study, the global Butylchlorodihydroxytin market size was valued at US\$ 15.83 million in 2025 and is forecast to a readjusted size of US\$ 19.80 million by 2032 with a CAGR of 3.8% during review period.

Monobutylstannic acid (MCPA), also known as dihydroxybutyltin chloride, is typically used as an intermediate in organotin compounds, primarily in the fields of PVC plastic stabilizers and catalysts. It exhibits specific chemical structural characteristics at room temperature.

The upstream of MCPA is directly linked to the tin metal processing industry and basic chlorination industry. Its main raw materials include metallic tin, tin tetrachloride, and butyltin trichloride. The core of its production process lies in the butylation reaction and controlled hydrolysis, requiring high levels of corrosion resistance in the reaction vessel and effective separation and recovery of the byproduct hydrochloric acid. Fluctuations in the price of metallic tin are the decisive factor affecting its downstream production costs.

Global sales in 2025 were approximately 633 tons, with an average selling price of US\$24.3 per kilogram. The industry's gross profit margin was around 25%.

This report is a detailed and comprehensive analysis for global Butylchlorodihydroxytin market. Both quantitative and qualitative analyses are presented by manufacturers, by region & country, by Type and by Application.
