Abstracts

According to our (Global Info Research) latest study, the global Butylphthalide API market size was valued at US\$ 23.77 million in 2025 and is forecast to a readjusted size of US\$ 42.76 million by 2032 with a CAGR of 9.0% during review period.

In 2025, global Butylphthalide API production reached approximately 33 tons, with an average global market price of around US\$700 per kilogram. Butylphthalide (specifically 3-n-butylphthalide or NBP, CAS 6066-49-5) is a neuroprotective Active Pharmaceutical Ingredient (API) derived from celery seed, primarily used to treat acute ischemic stroke. It improves cerebral blood flow, acts as an antioxidant, and protects the blood-brain barrier.

Based on our research, Butylphthalide API is not a broad commodity API market; it is a specialty API segment built around a single high-value originator molecule, formulation patent boundaries, regulatory filings, and the pace of generic or modified formulation entry. For many years, the API supply was largely integrated into the originator's formulation system, and the external merchant market remained limited. As more Chinese manufacturers obtain production licenses, registration numbers, or approval notices for butylphthalide API, the industry is moving from a captive-supply model toward a structure led by the originator and supplemented by emerging specialty API producers. Since the downstream butylphthalide formulation market is still heavily centered in China's clinical and reimbursement system, the global API supply base is also highly concentrated in China; overseas names identified in public searches are mostly reagent suppliers, sourcing agents, or unverified leads rather than confirmed drug-grade commercial API manufacturers.
