According to our (Global Info Research) latest study, the global Bypass Valve Sensor market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Bypass Valve Sensor means that it is mainly used for installation in many construction machines that can be used for long periods of operation. Examples are swashplate angle sensors for pumps, travel sensors for valves, etc. Among other things it detects the travel of the bypass valve in its closed state. It detects the stroke in the closed state of the bypass valve after the engine has been started and before the hydraulic system has been operated. and detects changes in this travel, thus enabling detection of valve opening and closing without detection errors. Even if errors arise due to the accuracy of the sensor or the position to which it is connected or errors caused by the position to which it is connected, this undesirable effect can be eliminated by detecting the change from the initial state.
