## Abstracts

According to our (Global Info Research) latest study, the global C-Mount Lens market size was valued at US\$ 5291 million in 2025 and is forecast to a readjusted size of US\$ 7170 million by 2032 with a CAGR of 4.4% during review period.

C-mount lens is a camera lens that adopts the internationally unified standard C-mount. This interface design allows the lens to be easily installed on compatible cameras and is widely used in industrial surveillance, machine vision, scientific research imaging and other fields. C-Mount lenses come in a wide variety of sizes, including fixed focus, zoom, wide-angle, telephoto and other specifications, which can meet the imaging needs of different scenes. Its high definition, low distortion, and easy replacement make C-Mount lenses an indispensable part of professional imaging equipment. In 2025, global C-mount Lenses production reached approximately 28.57 M Units, with an average global market price of around US\$ 180 per unit.

C-mount lenses belong to the mature industrial optics niche market, presenting overall characteristics of 'high standardization, wide application, and stable growth'. From the perspective of demand structure, its core driving force comes from the field of industrial machine vision and automation. With the upgrading of electronic manufacturing, semiconductor testing, and intelligent manufacturing, demand continues to grow. At the same time, security monitoring and scientific research applications provide stable supplements, making the market highly resistant to cycles. From the perspective of product characteristics, the C interface, as a long-term universal standard, is irreplaceable in the field of small and medium-sized sensors, especially in cost sensitive and high stability demanding industrial scenarios. However, it is gradually being diverted from larger target interfaces (such as F interfaces and customized interfaces) in the high-end imaging field. From the perspective of competitive landscape, the industry is

focused on enterprises with optical design and manufacturing capabilities. The core of competition lies in resolution matching ability, distortion control, and adaptability to camera systems. The price competition of mid to low end products is obvious, while high-end machine vision lenses are mainly based on technological barriers. From the perspective of development trends, on the one hand, industrial automation and AI vision applications are driving the growth in demand for high-resolution and large target lenses; On the other hand, the C interface, with its standardization and cost advantages, will continue to exist in the mid-range and existing markets for a long time, presenting an overall structural evolution of 'high-end substitution+mid-range stability'.
