## Abstracts

The global C-mount Lenses market size is expected to reach \$ 7170 million by 2032, rising at a market growth of 4.4% CAGR during the forecast period (2026-2032).

C-mount Lenses is a camera component with a 25mm diameter screw interface at the rear, a 2/3/1/2 inch image format, high-definition coating, glass lens, metal casing, and no aperture shift. It can fully open and close the aperture. The major diameter of the C-mount thread is 1 inch, which is 25.4mm, and the pitch is 32 teeth per inch. In 2025, global C-mount Lenses production reached approximately 28.57 M Units, with an average global market price of around US\$ 180 per unit.

C-mount lenses belong to the mature industrial optics niche market, presenting overall characteristics of 'high standardization, wide application, and stable growth'.

From the perspective of demand structure, its core driving force comes from the field of industrial machine vision and automation. With the upgrading of electronic manufacturing, semiconductor testing, and intelligent manufacturing, demand continues to grow. At the same time, security monitoring and scientific research applications provide stable supplements, making the market highly resistant to cycles.

From the perspective of product characteristics, the C interface, as a long-term universal standard, is irreplaceable in the field of small and medium-sized sensors, especially in cost sensitive and high stability demanding industrial scenarios. However, it is gradually being diverted from larger target interfaces (such as F interfaces and customized interfaces) in the high-end imaging field.

From the perspective of competitive landscape, the industry is focused on enterprises

with optical design and manufacturing capabilities. The core of competition lies in resolution matching ability, distortion control, and adaptability to camera systems. The price competition of mid to low end products is obvious, while high-end machine vision lenses are mainly based on technological barriers.

From the perspective of development trends, on the one hand, industrial automation and AI vision applications are driving the growth in demand for high-resolution and large target lenses; On the other hand, the C interface, with its standardization and cost advantages, will continue to exist in the mid-range and existing markets for a long time, presenting an overall structural evolution of 'high-end substitution+mid-range stability'.

This report studies the global C-mount Lenses production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for C-mount Lenses and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year.
