## **Abstracts**

C-reactive protein test is used to test the level of C-reactive protein (CRP) concentration in the blood. C-reactive protein test is adopted to check for infections or any other medical conditions, and increases in cases of inflammation. C-reactive protein test is conducted in order to evaluate the chances of developing cardiovascular diseases such as coronary artery diseases, which further can lead to severe heart attack. It is believed that increased level of C-reactive protein is coupled with augmented risk of heart attacks, however, C-reactive protein test does not specify the direct cause of inflammation, but indicates inflammation level triggered by other causes. C-reactive protein test is used in patients who have low chances, approximately 5% to 10% of having a heart attack in upcoming years. C-reactive protein test also provides assistance in determining the risk of second heart attack, as high level of C-reactive protein in a patient with previous heart attack history have a high chance of having the further heart attack. In addition to that, C-reactive protein is produced by liver cells, and according to research conducted, they are used as an indicator for determining cardiovascular disease. C-reactive protein test is also adopted in patient suffering from autoimmune disorders such as rheumatoid arthritis and lupus, as this disease also cause inflammation.

## **SCOPE OF THE REPORT:**

This report studies the C-Reactive Protein Test market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the C-Reactive Protein Test market by product type and applications/end industries.

The market for C-reactive protein test is primarily driven by increasing prevalence and

incidence of cardiovascular disorders on a global level. In addition, growing elderly population coupled with increasing cases of diabetes mellitus are also driving the growth of C-reactive protein test market. However, scarcity of skilled professionals, low demand of C-reactive protein test compared to other blood tests, and adverse reaction concerns are the major obstacles to the growth of C-reactive protein test market. The global C-Reactive Protein Test market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.

The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Southeast Asia regions.

North America, especially The United States, will still play an important role which cannot be ignored. Any changes from United States might affect the development trend of C-Reactive Protein Test.
