According to our (Global Info Research) latest study, the global C-Si A-Si CIGS Solar Cell and Module market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

C-Si A-Si CIGS Solar Cell and Module refers to a hybrid solar cell and module technology that combines crystalline silicon (C-Si) solar cells with amorphous silicon (A-Si) and copper indium gallium selenide (CIGS) thin-film solar cells. This hybrid structure aims to utilize the advantages of each material to enhance overall efficiency and performance. The C-Si cells provide high efficiency and stability, while A-Si and CIGS thin-film cells offer improved light absorption and tolerance to different lighting conditions. This hybrid approach allows for better energy conversion and increased power output, making it an attractive option for solar panel manufacturers.

China has implemented the Renewable Energy Law since 2006, in which Article 4 clearly states that, the State gives first priority to the exploration of renewable energy. Over the years, various departments of the Chinese government have successively issued a large number of policies, covering production, sales, taxation, subsidies and other aspects. After setting the carbon neutrality goal in 2021, from a national perspective, the upgrading of the energy structure is ever imperative, and therefore the optoelectronic industry has great potential. The European Commission released the Net-Zero Industry Act in 2023. This bill aims to stimulate local manufacturing in Europe, reduce import dependence on China, and ensure that at least 40% of the EU's clean energy demand can be met by 2030. The EU targets an installed solar capacity of 600 GW. Overall, the European market still has a lot of room for development. US 2022 release of the Inflation Reduction Act, which includes \$369 billion for energy security

and climate change investments. For the photovoltaic industry, the bill stimulates its development from multiple aspects such as corporate and individual tax credits, production subsidies, and loans throughout the industry chain, and revitalizes the domestic manufacturing industry in the United States. Japanese authorities plan to make solar panels mandatory for new residential buildings in Tokyo from 2025 onwards. It is estimated that by 2030, photovoltaic power generation will account for 14%-16% of Japan's total power generation, and the cumulative installed capacity of photovoltaic systems will be about 117.244 GW.
