According to our (Global Info Research) latest study, the global C120 concrete market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

C120 concrete is a high-strength concrete with a compressive strength standard value of 120 MPa (MPa) or higher. This kind of concrete is usually used in engineering structures that need to withstand extreme loads or have special requirements, such as high-rise buildings, bridges, tunnels, marine projects, etc.

The preparation of C120 concrete requires the selection of high-quality raw materials, precise mix ratio design and strict construction process control to ensure that it meets the predetermined strength and durability requirements. Because C120 concrete has high strength and excellent durability, it has been widely used in modern civil engineering, playing an important role in improving the safety and reliability of engineering structures.
