## Abstracts

The global C17300 Beryllium Copper Alloy market size is expected to reach \$ 146 million by 2032, rising at a market growth of 3.7% CAGR during the forecast period (2026-2032).

In 2025, global C17300 Beryllium Copper Alloy production reached approximately 2,581, with an average global market price of around US\$38 per kilogram. C17300 beryllium copper is an alloy with 0.2%~0.6% lead added to the beryllium copper component. It is easy to cut and has excellent machining properties.

The global market for C17300 Beryllium Copper Alloy is currently concentrated, with demand primarily driven by advanced manufacturing sectors such as consumer electronics, automotive electronics, and aerospace, which consistently require materials with high strength, conductivity, and precision machinability. Its development trend is closely tied to technological advancements in these downstream industries, including the miniaturization of electronic devices, vehicle electrification, and the rising demand for high-reliability connectors. Significant opportunities lie in the global shift towards intelligent and precision manufacturing, particularly through the expanding applications in 5G communications, new energy vehicles, and high-end connectors. Nonetheless, the market faces considerable challenges: the supply of key raw material beryllium is geographically concentrated, posing supply chain risks. Furthermore, the industry presents high technological and capital barriers, with production capabilities held by a limited number of players. Additionally, increasingly stringent health, safety, and environmental regulations governing the production, processing, and recycling of beryllium-containing materials continue to add to compliance costs and operational complexity.

This report studies the global C17300 Beryllium Copper Alloy production, demand, key manufacturers, and key regions.
