According to our (Global Info Research) latest study, the global C17300 Beryllium Copper Alloy market size was valued at US\$ 111 million in 2025 and is forecast to a readjusted size of US\$ 146 million by 2032 with a CAGR of 3.7% during review period.

In 2025, global C17300 Beryllium Copper Alloy production reached approximately 2,581, with an average global market price of around US\$38 per kilogram. C17300 beryllium copper is an alloy with 0.2%~0.6% lead added to the beryllium copper component. It is easy to cut and has excellent machining properties.

The global market for C17300 Beryllium Copper Alloy is currently concentrated, with demand primarily driven by advanced manufacturing sectors such as consumer electronics, automotive electronics, and aerospace, which consistently require materials with high strength, conductivity, and precision machinability. Its development trend is closely tied to technological advancements in these downstream industries, including the miniaturization of electronic devices, vehicle electrification, and the rising demand for high-reliability connectors. Significant opportunities lie in the global shift towards intelligent and precision manufacturing, particularly through the expanding applications in 5G communications, new energy vehicles, and high-end connectors. Nonetheless, the market faces considerable challenges: the supply of key raw material beryllium is geographically concentrated, posing supply chain risks. Furthermore, the industry presents high technological and capital barriers, with production capabilities held by a limited number of players. Additionally, increasingly stringent health, safety, and environmental regulations governing the production, processing, and recycling of beryllium-containing materials continue to add to compliance costs and operational complexity.
