## Abstracts

According to our (Global Info Research) latest study, the global C4 Raffinate market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Raffinate or C4 Raffinate or C4 residual is the residual product that remains after the separation of 1,3 Butadiene and 1-Butene from Mixed C4 stream. Because of the low Reid vapor pressure, it is preferred to natural gasoline in ethanol or gasoline mixes. Raffinate is majorly used to synthesize Methyl tertiary butyl ether (MTBE), which is a flammable substance. MTBE raises the octane and oxygen content of gasoline and works as a pollution-reducing compound in gasoline. Moreover, raffinate also finds application to synthesize Secondary butyl alcohol (SBA), a coupling agent in water-reducible coatings, industrial cleaners, and paint removers.
