According to our (Global Info Research) latest study, the global C8 HPLC Column market size was valued at US\$ 308 million in 2024 and is forecast to a readjusted size of USD 459 million by 2031 with a CAGR of 6.0% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

A C8 HPLC Column is a type of reversed-phase high-performance liquid chromatography (HPLC) column that features an octylsilane (C8) stationary phase. It's similar in functionality to the C18 HPLC column, though it is less hydrophobic due to the shorter C8 carbon chains attached to the silica particles. This difference results in slightly weaker retention of nonpolar compounds compared to C18 columns, making C8 columns ideal for analytes that are too retained or interact too strongly with C18 phases.
