Abstracts

The global Cab Shock Absorber market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The cab shock absorber is one of the important components of the car, which has a great influence on the comfort, stability and safety of the car. As of June 2023, the global automotive shock absorber market size has exceeded USD 10 billion and is expected to continue to grow in the next few years. According to statistics from the China Association of Automobile Manufacturers, China's auto production and sales will be 27.021 million and 26.864 million in 2022, a year-on-year increase of 3.4% and 2.1%, respectively. Among them, driven by policies such as steady growth and halving the purchase tax to promote consumption, the annual production and sales of passenger vehicles were 23.836 million and 23.563 million, respectively, a year-on-year increase of 11.2% and 9.5%, respectively, and the growth rate was higher than that of the industry as a whole. This shows the growth momentum of the Chinese auto market and the increased demand for automotive shock absorbers. With the continuous improvement of consumers' requirements for automobile quality, the prospect of the automobile shock absorber market will be broader.

The cab shock absorber is a device used to reduce the vibration and shock that the driver receives while the vehicle is running. They are usually installed on the chassis of the cab or the bottom of the seat, and provide a more comfortable driving environment and reduce driver fatigue through the design of shock absorption and isolation.
