CAB copper azole is an environmentally friendly wood preservative that effectively inhibits wood decay fungi, fungi and insect erosion through the synergistic effect of copper ions and azole compounds, thereby extending the service life of wood. The main ingredients of CAB copper azole wood preservative include divalent copper, azopentyl compounds, ammonia or amines and water. It is a new type of water-borne wood preservative, which is made by dissolving copper carbonate in an ammonia solution to obtain a dark blue copper ammonia solution, and then adding a tebuconazole solution to mix. It does not contain arsenic, chromium and other organic pollutants, nor does it contain harmful VPCs that may pollute indoor air, so it is considered an environmentally friendly wood preservative.
