Cabin luggages are small suitcases or bags that passengers are allowed to bring with them into the cabin of an airplane. They are designed to fit in the overhead compartments or under the seat in front of you. In 2025, global Cabin Luggages production reached approximately 87,813 k units, with an average global market price of around 80 US\$/ Unit. The production capacity of Cabin Luggages reaches 109,800 k units, and the industry's gross profit margin is approximately between 20% and 50%.

The cabin luggage market continues to grow, primarily driven by factors such as the global recovery in air travel, increased frequency of business and leisure travel, and stricter restrictions on cabin baggage size and weight by airlines. Consumers increasingly value travel efficiency and convenience, preferring cabin luggage that meets mainstream airline standards, is lightweight, highly efficient in storage, and combines design and functionality. Meanwhile, the popularity of short trips, urban getaways, and the concept of traveling light has further strengthened the reliance on small suitcases around 20 inches. Furthermore, material innovation, smart features, and trends towards branding and fashion are constantly stimulating replacement demand, driving cabin luggage to evolve from a practical tool into a consumer product that combines technological sophistication with lifestyle symbolism.
