## Abstracts

The global Cable Car and Ropeway market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A cable car is a type of aerial lift or transportation system that typically consists of small, suspended cabins or cars that are propelled and supported by cables. The cabins travel along a cable route, often from a lower station to an upper station, and vice versa. Cable cars are commonly found in urban settings, providing public transportation, sightseeing tours, or access to specific attractions within a city. They can also be used in mountainous regions for tourism or transportation purposes.

A ropeway is a broader term that encompasses various cable-driven transportation systems. Ropeways include not only cable cars but also other systems like gondolas, chairlifts, and funiculars. Ropeways are commonly used in mountainous or rugged terrains to provide transportation for both people and goods. They offer a practical solution for overcoming challenging landscapes where conventional roads or railways may not be feasible.
