A Cable CCV Extrusion Line (Catenary Continuous Vulcanization Line) is a production line specifically designed for the manufacturing of medium to high-voltage power cables. The CCV process is critical for applying and curing insulation layers, typically made from materials like cross-linked polyethylene (XLPE), around a conductor. This insulation is vulcanized (cross-linked) in a continuous, controlled environment to ensure that the cable has the necessary mechanical and electrical properties for high-voltage applications. This technology is essential for producing cables that are strong, durable, and capable of handling high electrical loads, making it a critical component in industries such as power transmission, infrastructure, and renewable energy.
