Abstracts

Cable float switch is a liquid level detection tool with a simple structure, convenient use, safety, and reliability. It uses micro switches, magnetic spring switches, or mercury switches as contacts. With a heavy hammer as the center, the angle changes as the water level rises and falls. When the angle between the horizontal surface and the upward or downward swing exceeds a certain angle, the steel ball or mercury will move up and down with the angle, outputting ON or OFF contact signals to achieve the liquid level detection function. The floating ball shell is available in plastic and stainless steel materials according to different needs, suitable for various high and low temperature sewage environments.
