Scope of the Report:

This report focuses on the Cable Glands in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Factors such as upgradation and renewal of existing networks, owing to government regulations, surge in the construction industry among developing countries, rise in energy demand levels globally coupled with the rise in population, and also a surge in real estates will help in the growth of the market in the near future. The rising demand for hygienic cable glands is one of the key trends that will gain traction in the cable gland market during the next few years. Hygienic cable glands find its application in food and dairy processing industry, pharmaceutical labs, the chemical production, and processing industry. Owing to the smooth surface finish, hygienic cable glands can be cleaned quickly using water jets. Several advantages which are driving the market are easier wash-ability compared with conventional cable glands, high resistance to chemicals, and high-grade corrosion resistant stainless steel. These advantages are increasing the popularity of cable glands among various end-users.

The United States remains to be the single largest market for cable glands (and other cable management tools), and it is expected to continue its dominance, buoyed by

increased up gradation, and renewal of existing public & private installations coupled with presence of several market incumbents. Asia-Pacific is expected to record the highest CAGR during the forecast period. Large scale up gradation and construction activities (especially in China, India, and other Asia-Pacific countries, where smart cities are being built to aid development) are expected to continue to drive future growth in this region.

The worldwide market for Cable Glands is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
