## Abstracts

The global Cable Intermediate Joint market size is expected to reach \$ 11213 million by 2032, rising at a market growth of 5.6% CAGR during the forecast period (2026-2032).

Cable joints are devices used to connect two cable segments to achieve electrical continuity and mechanical protection. By restoring conductor connection, insulation performance, shielding structure, and sealing protection, they ensure stable transmission of power or signals in cable lines and are widely used in power grids, communications, and industrial fields.

Upstream industries mainly include suppliers of conductor materials such as copper and aluminum, insulation materials such as cross-linked polyethylene, and auxiliary materials such as metal sheaths and sealants. Downstream industries cover power grid companies, telecommunications operators, rail transit projects, and new energy projects, with applications achieved through power material bidding, engineering support, and distributor channels. The global average price of cable joints is US\$93 per unit, with sales of approximately 80.1 million units and global production capacity of approximately 85 million units. The industry profit margin reaches 25%.

The global cable joint market is poised for a dual-driven growth pattern of technological upgrades and application expansion. With the accelerated upgrading and transformation of global power grid infrastructure, surging demand for renewable energy grid connection, and the widespread adoption of 5G communication networks, the market maintains steady growth. Technologically, the proportion of cold-shrink and prefabricated joints continues to increase due to their ease of installation, high reliability, and suitability for flammable and explosive environments; environmentally friendly insulation materials are gradually replacing traditional materials, responding to the

global trend of carbon reduction. Application areas are expanding from traditional power to offshore wind power, rail transportation, and data centers, with increased demand for waterproof and explosion-proof special joints. Simultaneously, the process of domestic substitution is accelerating, with leading domestic companies continuously increasing their market share in the international market due to their cost-effectiveness advantages.
