Cable protective sleeving is a type of shielding designed to safeguard electrical and data cables from physical damage, environmental hazards, and electromagnetic interference. It is typically made from materials such as nylon, polyester, silicone, or metal alloys, which offer varying levels of protection depending on the application. The sleeving can prevent abrasion, cuts, and impacts, while also providing resistance to heat, chemicals, and UV radiation. Additionally, it can offer protection against electromagnetic interference (EMI) and radio frequency interference (RFI) to maintain signal integrity. Used in a wide range of industries including automotive, aerospace, telecommunications, and electronics, cable protective sleeving ensures the durability and reliability of cables, extending their lifespan and enhancing overall system performance.
