## Abstracts

According to our (Global Info Research) latest study, the global CAC Air Curtain market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

An air curtain, also known as an air door, is a specialized device installed at an entrance to create an effective barrier for controlled airflow. Ideal for industrial and commercial environments, air doors improve energy efficiency by blocking the exchange of indoor and outdoor air. They help achieve optimal climate control, reduce temperature changes and minimize the intrusion of dust, pollutants and insects. CAC type air curtains are used in situations where temperature and humidity exceed the limits of our model air conditioners. A heater unit is added to condition the air mixed in the antechamber. Model CAC automatically adjusts as conditions change to optimize performance and reduce energy consumption. By using HCR sensors and software, CAC type can be integrated into the facility's refrigeration control and monitoring system. This allows not only remote monitoring, but also remote adjustment of the HCR equipment.
