## Abstracts

The global Cactus Fruit Powder market size is expected to reach \$ 88.17 million by 2032, rising at a market growth of 6.4% CAGR during the forecast period (2026-2032).

Cactus Fruit Powder is a dried, water-dispersible powder made primarily from the edible fruits of *Opuntia ficus-indica* (cactus pear). It is used as a natural ingredient to contribute mild fruity notes, fiber, and naturally occurring bioactives, and when derived from colored cultivars can deliver characteristic betalain pigments responsible for red/purple or yellow/orange hues.

Upstream raw materials typically include ripe cactus pear fruits (often differentiated by cultivar color), and may use distinct fruit fractions such as whole fruit, pulp/juice, peel, or seeds as the starting material depending on the target specification (flavor vs. color vs. fiber). Downstream, the powder is supplied to manufacturers of functional beverages/drink mixes, confectionery and bakery products, dairy and dessert formulations, and dietary supplements (powders/capsules). In adjacent personal-care value chains, it is also widely listed as a skin-conditioning ingredient, so cactus-fruit derived powders may be positioned for cosmetics depending on grade and compliance.

In 2025, global sales of Cactus Fruit Powder reached approximately 3,685 tons, with an average global market price of around US\$ 15/kg. The gross profit margin is approximately 20%-40%.
