Abstracts

The global CAD Dental Software market size is expected to reach \$ 323 million by 2032, rising at a market growth of 6.0% CAGR during the forecast period (2026-2032).

CAD Dental Software is a professional computer-aided design tool developed specifically for scenarios such as oral medicine diagnosis and treatment, denture fabrication, and oral restoration/orthodontics. Based on technologies such as computer graphics, 3D modeling, and parametric design, it connects with digital data from devices such as oral scanners, intraoral cameras, and CBCT (cone-beam computed tomography) to achieve accurate 3D modeling, personalized design, simulation adjustment, and data output of oral structures such as teeth, dentition, jawbone, implants, prosthetic restorations (crowns, bridges, inlays, etc.), and orthodontic appliances.

The dental healthcare industry is accelerating its transformation from a traditional manual model to a digital model. The widespread adoption of digital acquisition equipment such as intraoral scanners and CBCT has driven a comprehensive increase in demand for dental CAD software. This demand is expanding from large-scale prosthesis processing laboratories and chain dental clinics to small and medium-sized clinics and primary care facilities, with software gradually becoming a standard, fundamental tool for dental diagnosis and processing.

Artificial intelligence has become the core technological upgrade direction for dental CAD software. AI functions have evolved from early basic assistance such as 'automatic model alignment and edge detection' to deep intelligent design capabilities, including AI-automated generation of prosthesis models, AI-personalized orthodontic plan design, AI-precise implant positioning, and AI-intelligent evaluation of design

results. This significantly reduces the barrier to manual operation, improves design efficiency and standardization, and reduces reliance on experienced designers/doctors.
