According to our (Global Info Research) latest study, the global CAD in Apparel market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

CAD is a software tool package used for modeling and designing products and components with ease and accuracy. The CAD software package helps engineers, architects, and other design professionals in creating a digital prototype of products. These prototypes are created prior to production. A VAR is a company that resells a software from a software provider by adding features and/or services. The services may include consulting, training, support, and implementation.

The apparel industry requires high levels of customization, and this high demand for apparel customization has fueled the demand for CAD solutions across the industry. Initially, companies relied on mass production, which lead to cost reduction. This trend has changed with time and is being replaced by the mass customization concept, which is slowly traction among the companies. The capability of the CAD software to determine the cost of materials during the design stage will result in its increased adoption during the forecast period.
