According to our (Global Info Research) latest study, the global CAD in Industrial Machinery market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

CAD is a software tool package used for modeling and designing products and components with ease and accuracy. The CAD software package helps engineers, architects, and other design professionals in creating a digital prototype of products. These prototypes are created prior to production. A VAR is a company that resells a software from a software provider by adding features and/or services. The services may include consulting, training, support, and implementation.

The increasing use of computer-aided design (CAD) in packaging machinery will drive the growth prospects for the global industrial castings market during the forecast period. Since packaging materials have a strong impact on the customer's buying decision, it is considered to be one of the most important parts of the marketing mix. The packaging machinery is widely used for filling, labeling, coding, and wrapping of products. The increasing demand for the smart packaging system is resulting in the growth of the global packaging machinery market. The smart packaging system is in high demand in industries such as the food industry as it reduces the loss and wastage of food products. Moreover, packaging industries use barrier layers and germicidal films to preserve the food items for a longer period. Furthermore, the increasing demand for packaged food products is leading to the increased adoption of packaging machinery items, which are designed using the CAD software.
