CAD refers to a software tool used to achieve accuracy in designing and modeling of products and components of an organization. CAD solutions are widely adopted by industries, such as automotive, aerospace and defense, industrial machinery, electrical and electronics, and others. The solutions help end-users develop prototypes of products digitally before the production stage. They also help in the development of industry-specific products.

Scope of the Report:

This report studies the CAD market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the CAD market by product type and applications/end industries.
Increasing use of CAD software in packaging industry, along with growing product recalls in automotive industry, are some of the key factors positively impacting the growth of the industry. However, availability of free and open-source CAD software, and high cost of advanced and 3D CAD software are the factors negatively impacting the growth of the market.
China was the major contributor to the growth of the market and accounted for about 22% of the total market shares. The use of CAD softwarein the aerospace and defense, electrical and electronics, and automotive industries to improve the product development processes will augment the demand for CAD software from the country. Moreover, with the significant increase in foreign direct investment in R&D sectors of several end-users, the demand for ECAD will also increase.
