Abstracts

The global Cadmium-free Silver Brazing Paste market size is expected to reach \$ 211 million by 2032, rising at a market growth of 5.1% CAGR during the forecast period (2026-2032).

In 2025, the global sales volume of cadmium-free silver brazing paste is estimated to be approximately 126 tons, with a mainstream ex-factory price of around USD 1,150/kg. The gross margin of major manufacturers in the industry is estimated at approximately 20%-35%.

Cadmium-free silver brazing paste is a paste-type brazing material made primarily from cadmium-free silver-based brazing alloy powder, together with flux, binder, organic carrier and other additives. Common alloy systems include Ag-Cu-Zn, Ag-Cu-Zn-Sn and Ag-Cu-Zn-Ni. Compared with traditional cadmium-containing silver brazing materials, its key advantage lies in maintaining good wettability, fluidity, joint strength, electrical conductivity and thermal conductivity while avoiding the environmental and occupational health risks associated with cadmium. It is therefore more aligned with environmental regulations such as RoHS and REACH. In addition, its paste form enables dispensing, printing, quantitative feeding and automated assembly, giving cadmium-free silver brazing paste strong process adaptability in precision joining and batch brazing applications.

Its upstream materials mainly include silver, copper, zinc, tin, nickel and other metal raw materials, as well as fluxes, organic resins, solvents, thickeners and dispersing additives. Downstream applications mainly cover refrigeration and HVAC equipment, automotive component, electronic and electrical equipment, cemented carbide tool, aerospace equipment, medical device and precision instrument. Industry demand is

mainly driven by environmental substitution, automated brazing, precision manufacturing upgrades and the need for high-reliability metal joining. However, silver price volatility, low-silver-content substitution and lengthy customer process validation cycles remain key factors affecting market adoption. Overall, cadmium-free silver brazing paste is a small but specialized high-value-added segment within brazing materials, with future growth mainly coming from the replacement of traditional cadmium-containing silver brazing materials and the increasing penetration of automated brazing processes.

This report studies the global Cadmium-free Silver Brazing Paste production, demand, key manufacturers, and key regions.
