According to our (Global Info Research) latest study, the global Cadmium in Semiconductors and Electronics market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Cadmium is an inorganic compound with red-black solid appearance and it is categorised as semiconductor of n-type. The chemical formula of cadmium is CdSe. Cadmium is used in various applications such as manufacturing of industrial paints and batteries. The growing demand of cadmium in semiconductors and electronics is due to its malleability and ductility properties. Cadmium is also used as protective coating on metals in electronic and semiconductors market owing to its corrosion resistant property. Research and development departments are more focused on its nanoparticles for various new applications.

Following a strong growth of 26.2 percent in the year 2021, WSTS revised it down to a single digit growth for the worldwide semiconductor market in 2022 with a total size of US\$580 billion, up 4.4 percent. WSTS lowered growth estimation as inflation rises and end markets seeing weaker demand, especially those exposed to consumer spending. While some major categories are still double-digit year-over-year growth in 2022, led by Analog with 20.8 percent, Sensors with 16.3 percent, and Logic with 14.5 percent growth. Memory declined with 12.6 percent year over year. In 2022, all geographical regions showed double-digit growth except Asia Pacific. The largest region, Asia Pacific, declined 2.0 percent. Sales in the Americas were US\$142.1 billion, up 17.0% year-on-year, sales in Europe were US\$53.8 billion, up 12.6% year-on-year, and sales in Japan were US\$48.1 billion, up 10.0% year-on-year. However, sales in the largest

Asia-Pacific region were US\$336.2 billion, down 2.0% year-on-year.
